PROJECT DISPLAY

PROJECT DESCRIPTION

Our project aims to replace a front desk manager with our system, which will perform all the tasks typically handled by the front desk manager. This system is entirely manual and designed to be very user-friendly.

GOAL OF PROJECT

The primary goal of this system is to ensure that visitors or guests can feel comfortable and seamlessly collaborate with the university without encountering any questions or disturbances.

PROBLEM STATEMENT

- To meet a university teacher, individuals are required to obtain a meeting token.
- The university will provide assistance with admission information.
- This system provides an opportunity to contact and meet the best teachers
- This project enables the utilization of university helplines

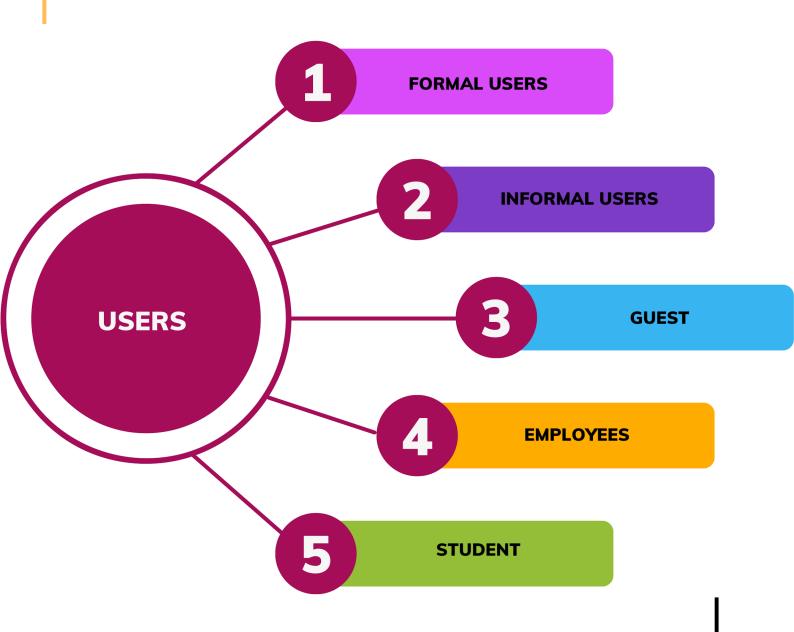

LIMITATION

The primary limitation of this project is its reliance on manual technology, and it would be significantly improved if it were automated. Unfortunately, automation is not currently feasible.

OBJECTIVES

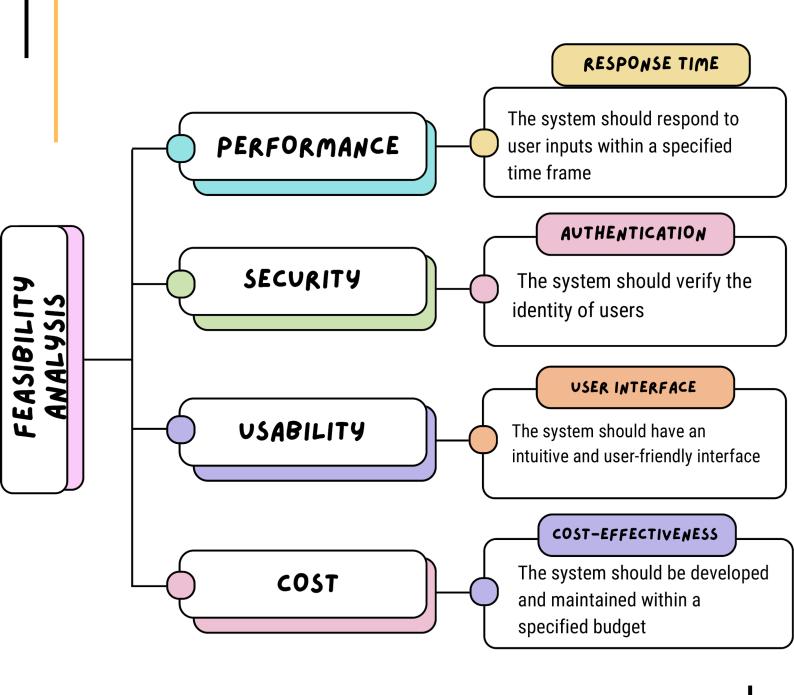

This system will handle faculty meetings, address new admission-related issues, and manage the university helpline."

TYPES OF STAKEHOLDERS (USERS)

FUNCTIONALITY GROUPING ACCORDING TO THE TYPES OF USERS LOG OUT **HISTORY** SMS REGISTER YES YES NO **FACULTY** TOKENIZA **PERMISSION** YES YES NO LOGIN CHECK WAITING ADMISSION INFO REPORT OR HELPING **ACCOUNT** LOG OUT COORDINATOR

FEASIBILITY ANALYSIS

OVERALL CONSTRAINTS

- No mobile call system
- No face recording system
- No fingerprint system

CONCLUSION

Our desk manager system is designed to make things easy and smooth for everyone. With this system, visitors and guests can easily connect with the university. You can contact the best teachers hassle-free, and all admission information is just a click away. The system also includes a helpline for any questions or concerns. While the system is manual right now, making it even better by automating it is something we're looking into for the future. Our system aims to create a welcoming and user-friendly experience for everyone involved.
